

ABSTRACT

A safety switch of a screwdriver comprises a trigger pivotally installed on the driver body; a push unit in a receiving space being installed within the trigger. One end of a safety rod is installed at a front end of the driver body; and another end thereof is installed at the trigger. The
5 safety rod is movable for pushing the push unit. The push unit comprises a torsion spring one end of which resists against the buckle for restoring the trigger; an ejecting unit resisting against the buckle one end of which is formed with a bevel for pushing a valve rod of the driver body so as to
10 trigger a screwdriver; and an elastomer one end of which is hooked to the ejecting unit; and another end of which is hooked to the trigger.
